# Online Test Application

Ideal Solution for Onsite & Offsite Candidate Evaluation & Recruitment

## ONLINE TEST APPLICATION

Online Test Application (OTA) is an ideal solution for candidate evaluation for your recruitment needs, especially while recruitment drives on university campuses.

When candidate evaluations are carried out at University Campuses or offsite locations, it is often difficult for companies to provide the same Online Examination platform that they utilize when evaluating candidates at their offices.

OTA allows easy online examination of candidates to help expedite the evaluation process even at an offsite location. It provides a simple & convenient way to setup recruitment examination data to conduct online test and perform other recruitment procedures. It includes setup of data related to colleges, venues, examinations, specializations, question bank and paper model for different specializations. It provides configuring category-wise cutoff criteria for the candidate test scores to expedite process of candidate selection.

Test schedules can be planned and downloaded to Client module. Client modules can be deployed in laptop and carried at venue for conducting recruitment examinations and can subsequently be synchronized with central module.

## KEY FEATURES

Supports offsite Intranet-based Tests

Integrated Cheat Prevention Measures

Specialization based Custom Question Bank

Category-wise Score Cut-off Criteria
